CXJ™ New Names to New Jumpers

“CXJ” have replaced “RG” in all jumper names.

To make it possible to distinguish between the previous and the new lines of jumper cables we have changed the description.

Examples:
FM-CXJ6-FM/UNIV/B/0.2,
FM-CXJ59-PVC-FM/UE/W/0.5
3.5/12M-CXJ11-3.5/12M/0.7

CXJ jumper means high quality and excellent performance. All the cables are being made especially for Cabelcon's jumper cables.

Opposed to the obsolete RG11 jumper cables - the new CXJ 11 cable has solid copper inner and outer conductors. The sheath is made of flame retardant and water

resistant Polyethylene (PE-FRNC). They are all mounted with new developed TripleGrip™ compression connectors containing the front part technology from the patented Cabelcon CX4 series of connectors (only made for factory installation).

All Former RG 11 and most HFX versions will be replaced by CXJ versions, meaning that both the existing and new item numbers will be extended with “-01”.

You can read much more about Cabelcon CXJ jumper cables in the enclosed CXJ jumper brochure – also available from our customer service department or for download from our website in PDF format.

New Grounding Rings Available in All Sizes

The new grounding rings are now available in all sizes from Cabelcon type 1 to type 8. This means “G” type connectors are no longer a necessity and enables you to reduce the number of stock items.

Connector with new grounding ring

Product News

New Multimedia Compression Tool

We are proud to announce the introduction of the new multimedia compression tool.

This compression tool can be used for all Cabelcon CX3 mini / RG59 & RG 6 - and for Gilbert UltraEase & UltraRange compression connectors.

The changeable plunger tip places itself easily in the tool due to magnetic contact.

Each plunger tip is marked with a letter for right fit to the following connector types as shown in the picture:

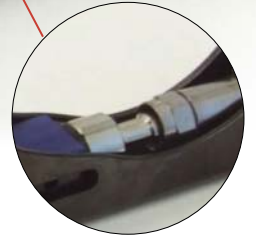

- A: CX3 F Short
- B: CX3 BNC
- C: CX3 F, IEC / GAF, GF, RCA
- D: GA - BNC

Description:
Multimedia Compression Tool
Item no. 98029075

Multimedia Compression Tool

Letter ID showing relation between plunger tip and connector type

Plunger tip has magnetic contact to ensure right position in tool - simple and easy to change

Latest additions to the CX3 compression family

Our range of CX3 compression connectors now counts more than 40 various types and sizes to cover most used interfaces within the RG6, 7, 11, 59 and mini cable families.

The latest additions are the F-connector "B" types available in size 3.7, 3.9, 4.9, 5.1 and 5.3, made with an O-ring behind the nut instead of the usual placement in the front. The contact surface are then extended, which is a great advantage when used especially on certain brands of splitters and taps with contact surfaces differing from SCTE F-standards.

A short version of the 5.1 "B" size is also now available. The short length makes it much easier to install on hard PE-cables, while the technical performance remains unchanged.

The short CX3 B & H versions

Also added is an "H" type - size 4.9 developed mainly for head end applications. The H type is a short version without o-rings and thus only made for indoor applications.

In additions we are also offering the wide range of high quality UltraEase™ and

UltraRange™ compression connectors made by Corning Gilbert. It means that we are able to supply a compression connector for any application and any "taste" in almost any type and size.

Product information and detailed datasheets on all products can be made on request.

Watch Out for Illegal Corning Cabelcon Copies

Being the leading manufacturer of quality products means that your products and ideas are objects for pirate copying. This is the case for Corning Cabelcon as well as for Corning Gilbert in USA .

Throughout the last couple of years we have experienced that some companies offer “look alike” copies of our compression and crimp as well as brass and aluminium hardline connectors. The original type inscriptions – and in some cases even false company names can be found on them. It means that it can be difficult to distinguish between copies and originals from the outside.

Performance in another world

However, when it comes to performance and installation friendliness we are suddenly in another world. We have received several samples of copies from exhibitions and tested them intensively.

The result is scaring. Some of the tested pirate connectors showed cracks in the metal parts and more of the tested connectors

Upcoming exhibitions

Cable & Satellite Show

Moscow, Russia

ANGA

Cologne, Germany
27 - 29 May 2008

In addition to these exhibitions, Cabelcon's products can be found on many other exhibitions around the world - represented by our local distributors and dealers.

Left: Pirat Copy Right: Original Cabelcon

simply broke into more pieces during the installation while others again were not able to be used after cable installation – as the nut simply could not rotate.

Also the electrical and mechanical performance was bad. Poor quality O-rings (apparently cut from a tube) – allowed entrance of water and moisture.

On top of this – these companies show “stolen” original pictures and drawings in their brochures and catalogues.

Worst case scenario would be if users by mistake should believe that these connectors are made by or for Cabelcon.

Based on these facts we decided last year to take action against it part wise through our international lawyers, but also via contacts to various exhibition organisers and other companies.

Based on good co-operation, fairness and mutual respect for law and order - it has

Left: Pirat Copy Right: Original Cabelcon

so far lead to new regulations for some exhibitions among others in Germany and Russia. It will be strictly forbidden to display pirate copies of others products and “pirate companies” who do not respect the rules will be abandoned from the exhibitions by legal means.

Watch out for pirate copies

We strongly advise end-users of our products to make sure that these are purchased from sources of original products.

In any doubt please checkout our website, where many of our distributors can be found listed. In addition to our distributors we also have many – not listed local dealers of our products.

Please feel free to contact either us or your nearest Cabelcon distributor for more information. If you are being offered copies of any Cabelcon connector we would be very interested in receiving reports about that.
